

FirmwareUpdate Software User Guide for macOS

1. Open system settings on your Mac and navigate to Privacy & Security. Confirm that the security settings are configured as shown in the reference image.

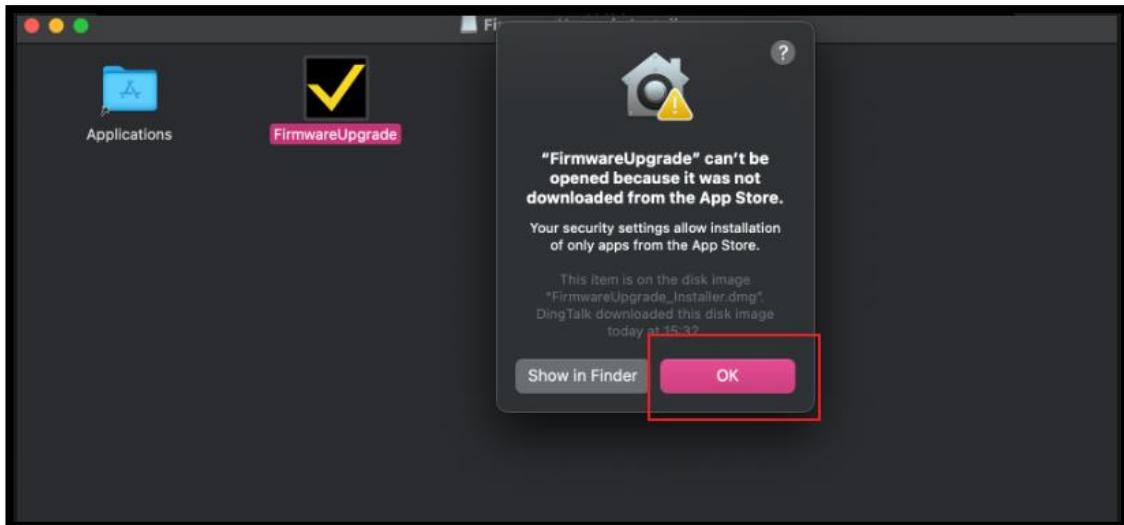

2. Locate the folder containing the **Installer.dmg** to start the installation.
Double-click **FirmwareUpgrade_Installer.dmg** to start the installation.
After double-click, the installer window will appear as shown in the reference image.

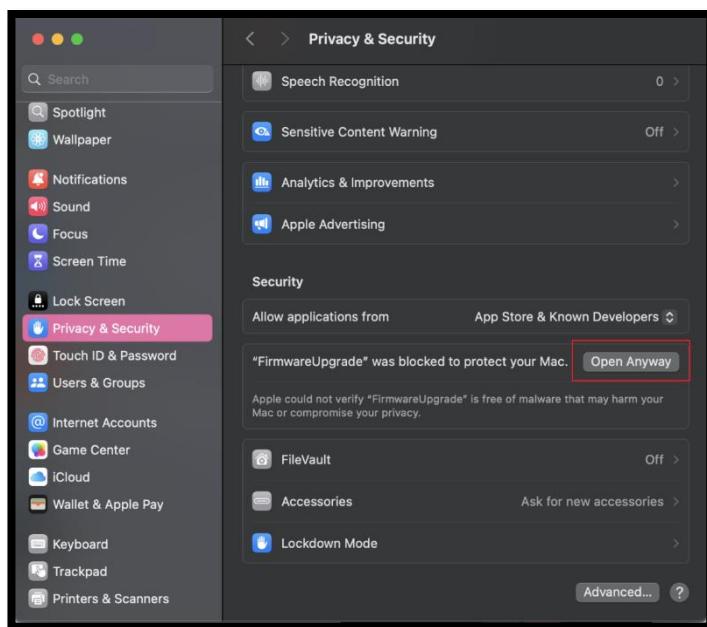

3. In the window shown in Step 2, select the **FirmwareUpgrade** application with logo and double-click it.

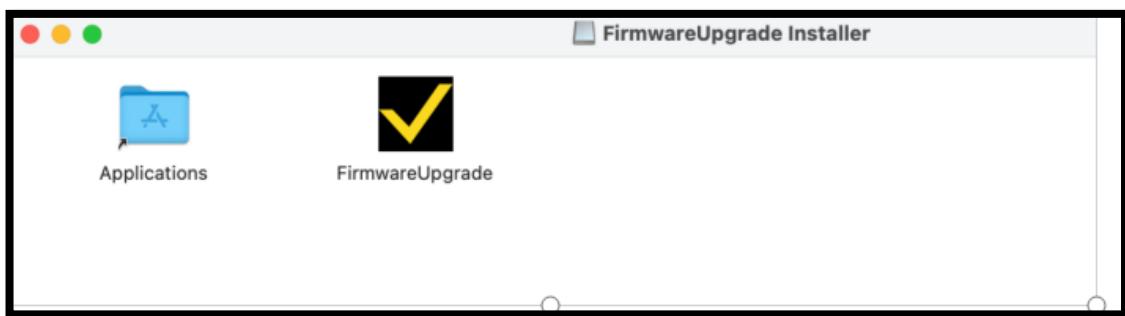

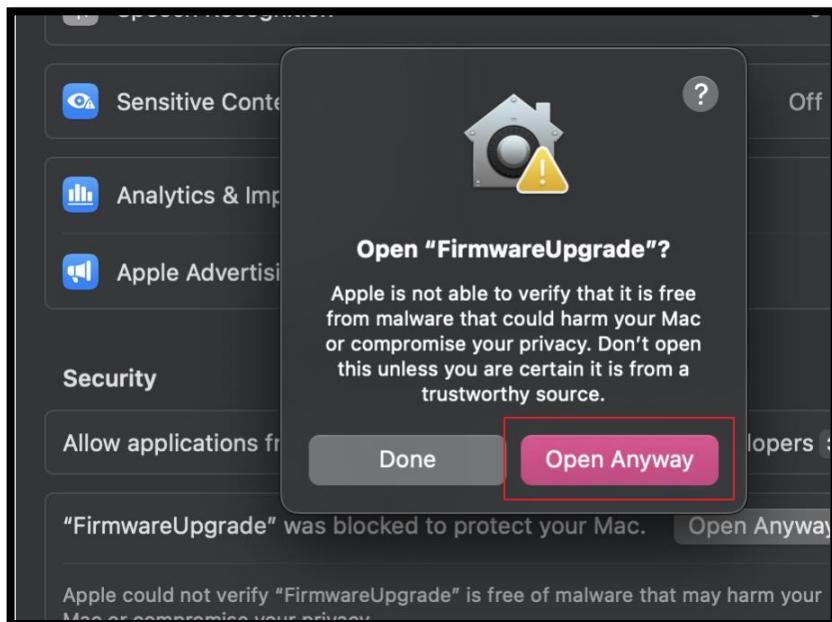

If the application does not open normally and a security warning dialog appears, click **OK** in the dialog to close it.

4. After closing the dialog in the Step 3, return to System Settings > Privacy & Security.

A button labeled **Open Anyway** will appear. Click **Open anyway** to launch the application.

Note: If a security warning dialog appears, **you must close the dialog first**. Only after closing it will the Open Anyway button appear in System Settings > Privacy & Security.
